# SUBJECT INDEX

Abrasion
an approximate model of abrasive cutting, 217
design and evaluation of abrasion pot experiments using statistical methods, 265
Additives
application of friction-polymer-forming additives for the running-in of rubbing surfaces, 1
Bearings
analysis of stiffness and damping characteristics of externally pressurized gas-lubricated porous bearings under conical mode of vibration, 199
elastohydrodynamic effects in elliptical bearings, 129
evaluation of non-metallic inclusions of steels used for rolling bearings from fracture surface by rotating ring fatigue fracture test, 305
wear mechanisms and finite element crack propagation analysis of high speed roller bearings, 77
Break-in wear
the break-in stage of cylinder–ring wear: A correlation between fired engines and a laboratory simulator, 57

Cast irons
effects of single-pass laser heat treatment on erosion behaviour of cast irons, 319
Cavitation erosion
the effect of shot peening on the cavitation erosion of pure Fe and austenitic stainless steel in distilled and 1% salt waters, 233
Ceramics
the formation of protective layers when machining steel with ceramic cutting tools, 99
Contacts
unlubricated fretting wear of mild steel surfaces in air at room temperature: II electrical contact resistance measurements and the effect on wear of intermittent loading, 341
Cracks
wear mechanisms and finite element crack propagation analysis of high speed roller bearings, 77
Cutting
an approximate model of abrasive cutting, 217
the formation of protective layers when machining steel with ceramic cutting tools, 99

Damping
analysis of stiffness and damping characteristics of externally pressurized gas-lubricated porous bearings under conical mode of vibration, 199
Diamond
some mechanical properties of brown and type II diamonds, 161

Elastohydrodynamics
elastohydrodynamic effects in elliptical bearings, 129
the influence of the viscoplastic and viscoelastic character of a lubricant on elastohydrodynamic lubrication, 185
Engines
the break-in stage of cylinder–ring wear: A correlation between fired engines and a laboratory simulator, 57
Erosion
effects of single-pass laser heat treatment on erosion behaviour of cast irons, 319
flux effects in solid particle erosion, 243

Fatigue
evaluation of non-metallic inclusions of steels used for rolling bearings from fracture surface by rotating ring fatigue fracture test, 305

© Elsevier Sequoia/Printed in The Netherlands

Finite element analysis
wear mechanisms and finite element crack propagation analysis of high speed roller bearings, 77
Flux effects
flux effects in solid particle erosion, 243
Fracture
evaluation of non-metallic inclusions of steels used for rolling bearings from fracture surface by rotating ring fatigue fracture test, 305
Fretting
unlubricated fretting wear of mild steel surfaces in air at room temperature: II electrical contact resistance measurements and the effect on wear of intermittent loading, 341
Friction
application of friction-polymer-forming additives for the running-in of rubbing surfaces, 1
the effect of surface hardness on friction, 113
frictional behaviour and its influence on quality in centreless grinding, 147

Grinding
frictional behaviour and its influence on quality in centreless grinding, 147

Hardness
the effect of surface hardness on friction, 113
High speed steel
the effect of some surface treatments on the life of high speed steel tools, 27

Impact
prediction of particle degradation during impact on a flat surface, 281
Inclusions
evaluation of non-metallic inclusions of steels used for rolling bearings from fracture surface by rotating ring fatigue fracture test, 305
Iron
the effect of shot peening on the cavitation erosion of pure Fe and austenitic stainless steel in distilled and 1% salt waters, 233

Lasers
effects of single-pass laser heat treatment on erosion behaviour of cast irons, 319
Lubrication
analysis of stiffness and damping characteristics of externally pressurized gas-lubricated porous bearings under conical mode of vibration, 199
the influence of the viscoplastic and viscoelastic character of a lubricant on elastohydrodynamic lubrication, 185

Machining
the formation of protective layers when machining steel with ceramic cutting tools, 99
Mechanical properties
some mechanical properties of brown and type II diamonds, 161

Oils
influence of base oil refining on the performance of viscosity index improvers, 33
Oxygen
the effects of O on the wear of tungsten-carbide-based materials, 365

Particles
flux effects in solid particle erosion, 243
prediction of particle degradation during impact on a flat surface, 281
Polymers
application of friction-polymer-forming additives for the running-in of rubbing surfaces, 1

Rolling
evaluation of non-metallic inclusions of steels used for rolling bearings from fracture surface by rotating ring fatigue fracture test, 305
wear mechanisms and finite element crack propagation analysis of high speed roller bearings, 77
Rubbing
application of friction-polymer-forming additives for the running-in of rubbing surfaces, 1

Running-in
application of friction-polymer-forming additives for the running-in of rubbing surfaces, 1

Salt water
the effect of shot peening on the cavitation erosion of pure Fe and austenitic stainless steel in distilled and 1% salt waters, 233

Shot peening
the effect of shot peening on the cavitation erosion of pure Fe and austenitic stainless steel in distilled and 1% salt waters, 233

Simulation
the break-in stage of cylinder–ring wear: A correlation between fired engines and a laboratory simulator, 57

Stainless steel
the effect of shot peening on the cavitation erosion of pure Fe and austenitic stainless steel in distilled and 1% salt waters, 233

Steel
the effect of some surface treatments on the life of high speed steel tools, 27
evaluation of non-metallic inclusions of steels used for rolling bearings from fracture surface by rotating ring fatigue fracture test, 305
the formation of protective layers when machining steel with ceramic cutting tools, 99
unlubricated fretting wear of mild steel surfaces in air at room temperature: II electrical contact resistance measurements and the effect on wear of intermittent loading, 341

Stiffness
analysis of stiffness and damping characteristics of externally pressurized gas-lubricated porous bearings under conical mode of vibration, 199

Strip drawing
modification of a surface profile's horizontal spacing during strip drawing, 329

Surfaces
application of friction-polymer-forming additives for the running-in of rubbing surfaces, 1
the effect of some surface treatments on the life of high speed steel tools, 27
the effect of surface hardness on fiction, 113
evaluation of non-metallic inclusions of steels used for rolling bearings from fracture surface by rotating ring fatigue fracture test, 305
modification of a surface profile's horizontal spacing during strip drawing, 329
prediction of particle degradation during impact on a flat surface, 281
unlubricated fretting wear of mild steel surfaces in air at room temperature: II electrical contact resistance measurements and the effect on wear of intermittent loading, 341

Tools
the effect of some surface treatments on the life of high speed steel tools, 27
the formation of protective layers when machining steel with ceramic cutting tools, 99

Tribotesting
comments on "multilaboratory tribotesting: results from the Versailles Advanced Materials and Standards Programme on wear test methods", 377
reply to the comments of N. C. Wallbridge and T. C. Chivers on "multilaboratory tribotesting: results from the Versailles Advanced Materials and Standards Programme on wear test methods", 379

Tungsten
the effects of O on the wear of tungsten-carbide-based materials, 365

Ultralow wear
on the chemistry of ultralow wear rate materials, 291

Vibration
analysis of stiffness and damping characteristics of externally pressurized gas-lubricated porous bearings under conical mode of vibration, 199

Viscoelasticity
the influence of the viscoplastic and viscoelastic character of a lubricant on elastohydrodynamic lubrication, 185
Viscoplasticity
the influence of the viscoplastic and viscoelastic character of a lubricant on elastohydrodynamic lubrication, 185
Viscosity
influence of base oil refining on the performance of viscosity index improvers, 33

Wear
the break-in stage of cylinder–ring wear: A correlation between fired engines and a laboratory simulator, 57
on the chemistry of ultralow wear rate materials, 291
comments on "multilaboratory tribotesting: results from the Versailles Advanced Materials and Standards Programme on wear test methods", 377
the effects of O on the wear of tungsten-carbide-based materials, 365
reply to the comments of N. C. Wallbridge and T. C. Chivers on "multilaboratory tribotesting: results from the Versailles Advanced Materials and Standards Programme on wear test methods", 379
unlubricated fretting wear of mild steel surfaces in air at room temperature: II electrical contact resistance measurements and the effect on wear of intermittent loading, 341
wear mechanisms and finite element crack propagation analysis of high speed roller bearings, 77
